

A

Bibliographies

each processed PDF contributes one reference list

B1

REFERENCES

Ostrom, E. (1990).

Fehr, E. (2002).

Tversky, A. (1974).

B2

REFERENCES

Ostrom, E. (1990).

Ostrom, E. (2000).

Fehr, E. (2002).

Bowles, S. (1998).

B3

REFERENCES

Ostrom, E. (2010).

Bowles, S. (1998).

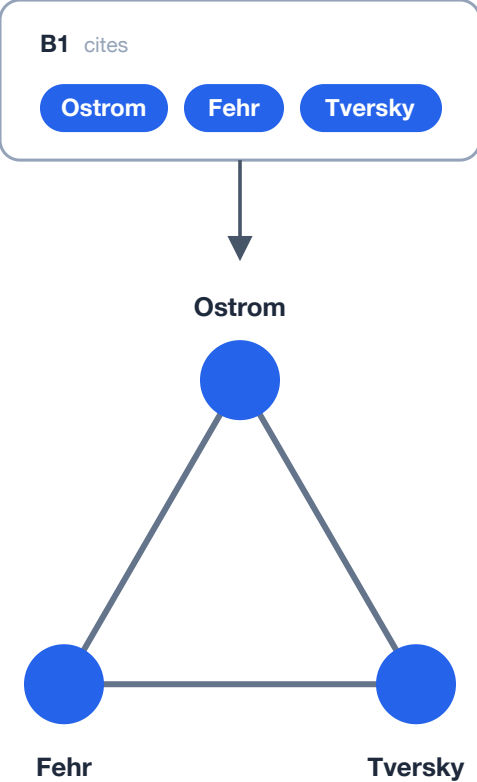

Cárdenas, J.C. (2003).

Surnames in blue are the author occurrences the network is built from — one mention per author, per bibliography.

B

One bibliography makes ties

every pair of authors it cites is joined

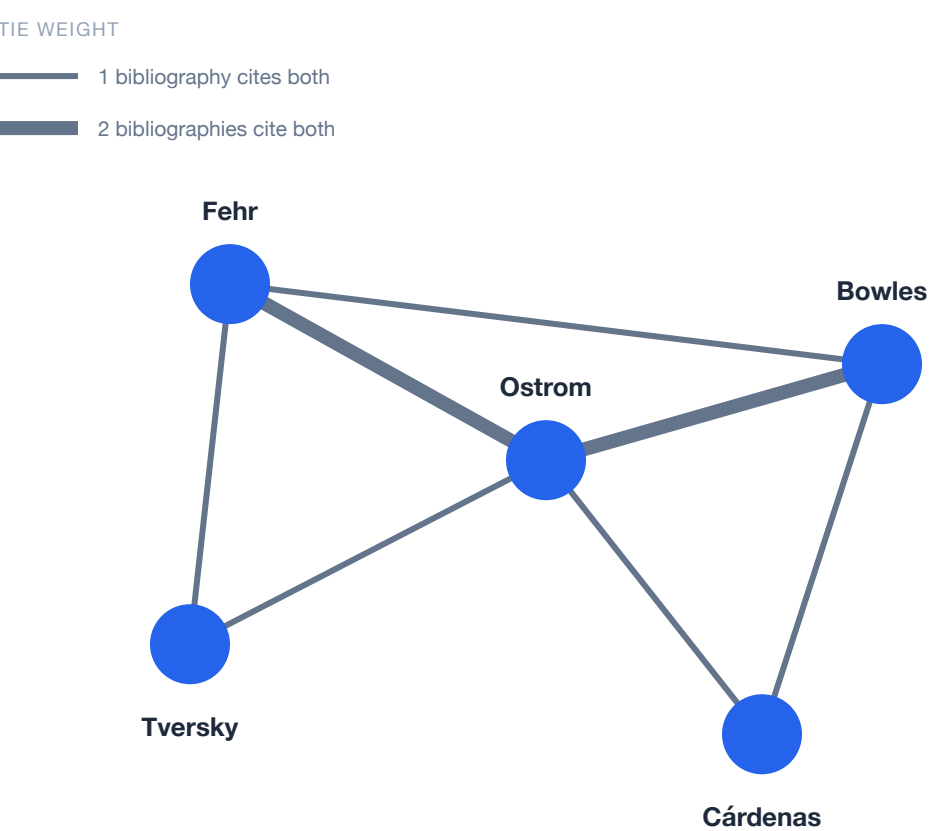

B1 names three authors, so three ties form, each of weight 1. A bibliography naming k authors contributes $k(k-1)/2$ ties.

C

Accumulate across bibliographies

the tie weight counts how many cite both

Ties are undirected: Ostrom and Fehr need never have cited each other, or ever met — a third party joined them.
